

Electronics Group

Microwave Antenna and Sensor Development:

- The microwave research laboratory of department of Physics is presently engaged in the research & development of microwave sensors for the measurement of dielectric properties of different materials. The group is also involved in works related to the design and development Microstrip antenna and Microwave filters.
- The laboratory is equipped with 1MHz – 6GHz two port Vector Network Analyser (Rohde & Schwarz: Model No ZNLE6) capable of conducting full S parameter analysis for antenna and other components.
